

One approach. Different parts of the work.

A growing family of practical construction safety tools for preparing work, organising project information and checking conditions at the point of work.

ADVANCED DEVELOPMENT

RAMSlogic

Guided risk assessment and method statement workflow. The original product behind the suite: scope, activities, hazards, critical decisions, controls and method. Progressing through release assurance ahead of external pilot use.

PILOT AVAILABLE

CDMlogic

A structured workspace for project information, dutyholder details and supporting evidence. Extends the suite approach into construction project records. Pilot access may require an invitation or an existing account.

PROTECTED PILOT

POWRAlogic

Guided point-of-work checks and a saved assessment for supervisor review. Takes the same practical thinking to the task and its conditions. Pilot access may require an invitation or an existing account.

Built around the people doing the work.

FOR YOUR TEAM

Contractors and project teams

Prepare the work and organise project information. Explore CDMlogic now, or discuss RAMSlogic in development.

Site managers and supervisors

Explore POWRAllogic for task conditions, control checks and a record for supervisor review.

Health and safety advisers

Explore structured information, evidence and visible review points that support professional judgement.

THE FOUNDER

Lloyd Godsall brings a background in carpentry and joinery, project and contracts management, and health and safety work across construction, civil engineering, utilities and renewables. His qualifications include a NEBOSH National Certificate and an NVQ Level 6 Diploma in Construction Contracting Operations Management. Professional background supplied by Lloyd; certification available on request.

A WIDER FAMILY IN DEVELOPMENT

Contractor PQQs and assessments, policies, construction phase plans, hazardous substances, major accident hazards, permits, safe systems, procedures, incidents and audits. Functionality and availability will be confirmed as each tool develops.

RESPONSIBLE USE

Tools support professional judgement. Software does not guarantee safety or compliance, assume dutyholder responsibilities or authorise work. Drafts and records require appropriate review against the actual task and organisational arrangements.

START WITH YOUR WORKFLOW

Tell Lloyd about your team and what you need to improve. Discuss a walkthrough and, where suitable, agree the pilot route before use. RAMSlogic is not yet an external pilot.
